## Capstone Test Plan

## Team Code: W052510

**Team Members**:

| Name | | St. Code |
|---|---|---|
| **1-** | Mawada Ashraf | **524070** |
| **2-** | Jana Osama | **524099** |
| **3-** | Sofyan Alaa | **524009** |
| **4-** | Bassam Ramadan | **524093** |
| **5-** | Yassin Khaled | **524068** |

**Supervised by:**

Eng. Rawan Amr

# Test Plan

## 1. Test Objective

**What is the goal of the test?**
The goal of this test is to make sure the appointment booking website is easy to use and works correctly for patients, doctors, and clinic staff and that all buttons function correctly to provide a smooth user experience.

## 2. Testing Approach

**How will the prototype be tested?**

- We will test the system manually by using it like a real user.
- A small group of users will try the prototype and share their opinions.

## 3. User Feedback

**How will user feedback be collected and analyzed?**
Users will use the system for about 15 minutes.

- After that, they will answer a short survey about:
  - Is the website easy to use?
  - Is booking an appointment clear?
  - Did they face any problems?

We will review the answers and focus on the most common issues.

## 4. Functional Testing (Software)

**Link Test Cases**

**How will you verify that the software functions correctly?**

We will test the main features to make sure everything works as expected.

**We will test:**

- Login works correctly
- Booking an appointment is successful
- Appointments do not overlap
- Doctors can see their schedules
- Users can move between pages easily
- Data is shown correctly

## 5. Suggested Improvements

**What improvements will be made based on the test results**
After testing, we will:

- Fix any errors found
- Make confusing steps simpler
- Improve button visibility if needed
- Update the system based on user feedback
